Inspect and quote boom lift per maintenance. Tech rq Chris M. Tech to provide SN and Data Plate.

WORK PERFORMED: Located lift tested it was on 45% BDI, as I was using it it went down to 40% as I was cycling through functions it would fluctuate between 40% and 100% BDI the steering would cycle between working and not working. Lift would code and then start working again. Inspected batteries there is 4 batteries from 2022 they were very low on water. Watered batteries and placed on charge will return and test

Chris Mangieri (2024-11-11)

Arrived on site located lift BDI was fully charged and lift was functioning properly looked up 1712 code it is saying "value to high" check the main motor for 48 v checked and it had 46v but while lifting the motor brushes are arcing very bad attempted to remove one and they are welded in will quote brushes.

Chris Mangieri (2024-11-12)

Quote to replace x4 brushes in main motor.

Contact is sav.maint.management@ship8.com

WORK PERFORMED: Arrived to customer location located lift brushes were swollen and stuck I place removed motor cap pushed out brushes. Cleaned and inspected armature Installed new brushes and reinstalled cap and covers. Tested lift it was running very smooth no sparking inside of motor seen. No codes or sudden stoppage of the lift. Tested all functions. Swollen brushes believed to have been caused by the mixture of batteries instill over time instead of replaced all at once that puts a strain on the older batteries and the motor. Returned to service

Chris Mangieri (2024-11-20)
