Hello,

Approved for Depots with unitized bundles on a single pallet due to height constraints.

Thanks,

Sarah Collins

Please find the attached CAD.

We would look to wrap the goods into unitized bundles. We would like to plan to ship double stacked bundles on one wooden pallet.

Due to the height we are concerned that including a second wooden pallet would be too tight for the regions to offload the goods.

Let me know if this is workable.

Best Regards

Kyla,

Can you share the pallet CAD that was provided? Depot Management (on copy) would need to approve this type of load.

Hi Ryan,

Checking back in on approval to ship the domestic safety stock in unitized bundles, double stacked but on one pallet.

Did you have a chance to confirm this with your team or can you point me to the contact to get this approved?

Best Regards

Yes, the product would be strapped/wrapped together into unitized pallet bundles.

Your receiving depot would use a clamp to pull the top layer off the truck and drop it onto a pallet. The bottom layer would already be on the pallet.

Hi Emily,

Assuming the answer is yes; would domestic product still be in pods?

Hi Kyla and Ryan,

Attached is an updated puppy pad pallet CAD. A slight change from the one I sent in Dec to the height of the pallet load.

For the DI containers we will plan to ship floor loaded.

Also, for the domestic goods, would it be possible for us to double stack on one pallet? I have been through all the packaging spec docs and don't see specific details regarding that? Maybe I missed it?

Best Regards
