Manufacturer & Exporter of Home Textile Products

VISION

Our aim is to be a market leader in Home Textile Manufacturing.

We will succeed by creating unmatched value for our global customers and stakeholders through our exceptional Product, Quality & Services. We are committed to the ongoing learning, development & growth of our valued employees.

WHO WE ARE

Danial Fabrics (Pvt) Ltd. Was established and incorporated as private company in the year 1998 as Manufacturer of Fabrics, Quality Institutional Products & Home Textiles at Lahore, Pakistan. The company owns unit of 89 Sulzer machines in 130 and 153 inches width.

Our large production facility enables us to complete bulk orders in short lead time. The management has decades of experience of the industry. We are proud to be leaders in quality. We believe in doing what we say! A piece of land of 15 Acres was purchased at Raiwind located about 40 Kilometers from the city of Lahore which is capital of province of Punjab. An area of approximately 70,000 SQ FT was constructed to install a composite weaving unit of capacity of approx. .750 million meter per month.

PRODUCTS RANGE

Our main product line is Woven Made-ups for Institutions i.e. Hotels, Hospitals and Home Furnishing. Our various colors and sizes can suit both European and US markets. We are using a vast range of Fibers in 100% Cotton, Poly Cotton, CVC ratios and yarn dyed etc.

We can weave any article like plain /sheeting, twill/drill, percale, sateen or any dobby design as per client desire.

WEAVING

Weaving is second level after spinning. Here, the yarn from spinning section is sent further for doubling and twisting. It is then processed for shifting of yarn in convenient form of package containing sufficient yarn length. At the stage of creeling the exhausted packages are replaced with the new ones which is followed by warping. The warp yarn is provided a protective coating to lessen the breakage of yarn which is called as sizing. It is considered as an important segment. This yarn is then processed for winding on weavers beam supported by the final step of weaving.
